

## Pump Control 2

After power on, the default automatic mode is activated and pump is in run state.

When level sensor max is reached, the pump is switched off.

Delay timer of 3 sec. ensures there is no 'slopping' of on / off pump when max level is reached.

Manual/Auto pushbutton changes every time pressed the operation mode to opposite.

During manual mode, the pump can be switched on only by pushbutton 'Manual Pump Start' and switched off by pushbutton 'Manual Pump Stop' or by 'Level Sensor Max'.
